

Remote Monitoring and Management

ninjaOne®

Solving IT complexity

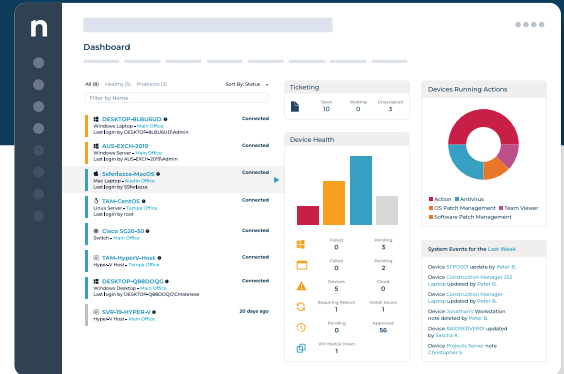

A Remote Monitoring and Management (RMM) needs to do more than just allow you to remotely manage endpoints. It needs to drive technician efficiency so you can scale effectively. Complex overbuilt RMMs that require a full-time employee to do not deliver on this promise.

Modern endpoint management requires an RMM that delivers all the functionality enterprises require with the ease of use and management required by SMBs.

KEY FEATURES

- **Multi-platform management**
Quickly resolve IT issues and minimize downtime with instant access to your Windows, Mac, and Linux endpoints as well as virtual machines and SNMP devices from within a single-pane-of-glass.
- **Secure remote access**
Quickly, easily, and securely take control of endpoints using one of NinjaOne's fully integrated, one-click remote access tools. Including NinjaOne Remote, TeamViewer, Splashtop, RDP, and ConnectWise Control.
- **Monitoring & Alerting**
Monitor endpoint health, performance, hardware, and software data and create custom alerts, notifications, and tickets based on this data for near real time IT asset monitoring.

- **Easy IT automation**
Deploy automations on demand, on schedule, or in response to alerts using one of five common scripting language NinjaOne supports. Leverage the NinjaOne API to tie NinjaOne actions to other systems.
- **Patch Management**
Keep endpoints secure and devices up to date by automating patching for over 140 common business applications and Windows, Mac, and Linux operating systems.
- **Endpoint protection**
Centrally manage your antivirus solution, monitor drive encryption, store, and automatically inject credentials, and keep rogue devices off your network with NinjaOne's built-in security solutions.

The NinjaOne Difference

Fast to learn, simple to use.

The cloud-native NinjaOne platform is built from the ground up by our team, optimized for power and ease of use.

#1-rated free support.

Our top-rated Support team is there when you need them, earning them an average 98% satisfaction rating year over year.

Management of ALL your devices.

See, monitor, and manage Windows, macOS, Linux, SNMP, virtual, and cloud devices from one console.

Unlimited, free on-boarding and training.

We'll help get you up and productive in days, not months, and training is always there for your team.

Automation from day one.

Patch automation is part of every device setup and hundreds of out-of-box automation scripts are ready to use and save you time.

Constant innovation.

Frequent releases that include features requested by our customers ensures NinjaOne continues to meet your needs.

Fast navigation.

For MSPs, every second counts, so the NinjaOne platform is optimized for speed and efficiency.

Manage, Patch, and Support All Your Client Endpoints

What our customers are saying

"What I love about NinjaOne RMM is that the product has been designed from the ground up. The flow of the tool makes sense."

Adam Steinhoff
CEO, Dedicated IT

"NinjaOne enables us to be proactive both for our clients and our business. It saves everyone on the team an astronomic amount of time."

Brian McFarland
Project and Operations Manager,
Illuminate

"NinjaOne is a huge force multiplier for us. It's effectively like hiring two full-time employees."

Leo Raikhman
Director, Co-Founder, Cloud4x
