

Mobile Device Management

Single-pane management for all your mobile, end-user, and infrastructure endpoints

NinjaOne Mobile Device Management (MDM) enables IT organizations to manage Android and Apple mobile devices alongside end-user Windows, macOS, and Linux devices along with servers, virtual machines, and even networking devices – all within a single, user-friendly console.

KEY FEATURES

Complete Inventory and Tracking

You can't manage what you can't see. NinjaOne MDM provides complete visibility into all managed devices and applications supporting user workflows on the go. Gain complete, accurate and updated inventory of corporate-owned and BYOD devices to reduce the potential for device-based risks.

Easy Provisioning and Configuration Management

NinjaOne MDM enables admins to provision mobile devices with applications to best support users and configure them in a manner that contributes to an overall strong, secure, and compliant posture. The hardening of mobile devices through thoughtful configuration choices and by restricting actions is a critical first step in building a robust, multi-layered security model.

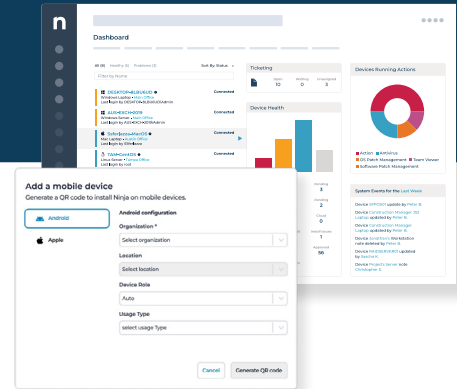

Remote Troubleshooting

Remotely access and view users' mobile device screens to gain a clear understanding of the issue at hand and then take the steps necessary to resolve it as quickly as possible so that the user can continue their work.

NinjaOne MDM Key Features

The NinjaOne Difference

Fast to learn, simple to use.

The cloud-native NinjaOne platform is built from the ground up by our team, optimized for power and ease of use.

#1-rated free support.

Our top-rated Support team is there when you need them, earning them an average 98% satisfaction rating year over year.

All your devices in a single pane of glass

Efficiently manage all your endpoints regardless of operating system – from smartphones to servers, VMs to networking devices – within a single console to reduce complexity and cost.

Unlimited, free on-boarding and training.

We'll help get you up and productive in days, not months, and training is always there for your team.

Automation from day one.

Patch automation is part of every device setup and hundreds of out-of-box automation scripts are ready to use and save you time.

Constant innovation.

Frequent releases that include features requested by our customers ensures NinjaOne continues to meet your needs.

Fast navigation.

For IT admins, every second counts, so the NinjaOne platform is optimized for speed and efficiency.

Manage, Patch, and Support All Your Endpoints

What our customers are saying

“Working at a lean IT department, NinjaOne has allowed us to automate a lot of functions that we would not normally have time to take care of. NinjaOne takes care of Windows and 3rd party patching, alerts us to problem PCs, and provides detailed system snapshots that we can reference when supporting employee computers.”

Justin Palmer, IT Manager, The Dewberry Charleston, CEO, Dedicated IT

“NinjaOne is easily the most solid and reliable product we have used. When we moved to NinjaOne we found it had all the features we used and more, it was so much faster and easier to use, and they keep adding more features all the time. Support is wonderful and easy to get in touch with in the rare instances when it is needed. Account managers are not pushy, very quick and easy to work with.”

Garrett S., Principal Owner, Circuit Savers

“NinjaOne took our IT department and completely transformed the way we work. Instead of utilizing seven separate tools, we were able to consolidate everything under a single pane of glass.”

Aaron Weintraub, IT Technician, Proconex
